I'm copying Jim Ball so he can see your suggestions below. Setting up a regular meeting schedule is part of we need to discuss Thursday, but I agree on at least every 2 weeks.

My calendar is fairly open tomorrow. Want to set up a meeting for the 3 of us in the morning?

-Paul

Ok. I'm catching up on email and have a lot to do from last week—and now the perchlorate stuff from Lynn.

Ex. 5 Deliberative Process (DP)

Also, the Inhalation WG has meetings scheduled for every Monday at 9:30—and will cancel if they don't need them. That may be a little overkill, but could be useful here in the beginning. Maybe we should consider having a meeting scheduled at least every 2 weeks.

Just saw your email—I will begin to coordinate the modeling review group...

PKWG,

I think I have all the right/current folks on this list, along with our liaisons and additional contacts.

Our first assignment under the new IRIS process is described below; see attached. We should have the appendices by early next week.

Ex. 5 Deliberative Process (DP)

We can discuss further at our meeting next Thursday, but in the mean time you can look over the attached draft and consider if it's one you want to do.

-Paul

Subject: Formaldehyde assessment for review by the IRIS Disciplinary Workgroups

Hello Disciplinary Workgroup Co-Chairs – Attached are the Tox Review for Formaldehyde, a memo describing approaches to the quantitative cancer assessment, and a “map” that identifies sections that pertain to each Disciplinary Workgroup. The Supplemental Information document will follow Tuesday.

We will discuss the process for reviewing this assessment at Tuesday morning’s IRIS Management Council. Then the management liaisons can discuss the review process with their respective Co-Chairs. The Co-Chairs should select primary and secondary reviewers for the sections that are pertinent to their discipline, forward the assessment to their respective Workgroups, and determine how and when their Workgroup will meet to discuss the comments that you will send to the Assessment Managers (Barbara Glenn and Andrew Kraft).

Your review should cover:

1. Are the sections you reviewed clear, convincing, and objective?
2. Are the conclusions supported by the evidence presented?
3. Are the science issues addressed effectively, with alternative perspectives discussed where appropriate?
4. Are the issues raised by the NRC review of April 2011 addressed effectively?

You need not review the original literature. Begin with the evidence tables and see whether the synthesis follows logically and clearly. If not, that is a comment to take up within the Disciplinary Workgroup.

I will also welcome your feedback about how this process worked and how we might improve it in the future.

Thank you for your assistance in simulating the SAB and public reviews of this important assessment, Vince

Subject:

The draft toxicological review for formaldehyde is attached. A file containing supplemental information will be sent later today (we have encountered problems inserting portions, complicated by the problems with Outlook that occurred today). We (the formaldehyde team) are looking forward to participating in the review process and anticipate a stronger product as a result.

Ex. 5 Deliberative Process (DP)

Instead of extensive track-changes in the files, providing editorial comments in comment bubbles will be more helpful for revisions because the document is not static at this point.

Regards, Barbara and Andrew
